

Varistar LHX+ 45 / RackChiller In-Row 45 Condensate Drain

Data Solutions

For facilities which operate at low chilled water temperatures, there is an increased risk of condensation. The condensate water will drip into the condensate tray where it will be collected. This kit enables the device to remove the condensate water into a condensate management plumbing network.

The kit is meant for installations with a condensate water plumbing overhead of the cooler. It transports the water with the help of a pump above the level of the condensate tray.

FEATURES

Provides condensate water management for facilities with low chilled water temperatures

Condensate water which collects inside the condensate tray / bottom panel of the cooler will be removed

Can be retrofitted even after cooler installation
