

nVent ERICO PermaGround Compression Connector, Figure 6-Crimps

The nVent ERICO PermaGround Compression Connectors, Figure 6-Crimps, are designed to join two grounding conductors or connect a grounding conductor to a grounding rod within a grounding system using a compression tool. Made from high-strength conductive copper, they provide a low-resistance connection that prevents corrosion, ensuring durability. With their range-taking capabilities, the Figure 6-Crimps are compatible with various conductors and ground rods. To guard against oxidation, the inner surface of the Figure 6-Crimps is prefilled with an oxide inhibitor that creates an airtight seal around the conductors once the connection is made. This feature makes the Figure 6-Crimp connector suitable for a wide range of applications.

FEATURES

Made from high-strength conductive copper for durability and maximum conductivity

Prefilled with an oxide inhibitor to prevent oxidation and ensure a long-lasting connection

Compatible with various conductors and ground rods, offering versatile application options

Can be installed in all weather conditions, making it suitable for diverse environments
