

"AC" Option

The "AC" option is the internal audible alarm option that contains a 110 dB, pulsed siren, a blinking red "trouble" LED, and one green LED per phase. The audible alarm and red LED are powered by a long-life lithium based 9 V battery with a ten-year shelf life. The battery allows the siren to operate continuously for a minimum of 72 hours and the red, "trouble" LED to operate continuously for a minimum of 144 hours. These battery powered circuits are optimized to minimize power consumption when in an alarmed and unalarmed states. The alarm senses the status of the normally open dry relay contact (with power applied) of the connected SPD. The normally closed contact is available for use in the installation. The audible alarm option has provisions for installations requiring NEMA 4 and NEMA 4X ratings.
