

Welcome to the future of  
connection and protection

World-leading electrical solutions

CADDY ERICO HOFFMAN RAYCHEM SCHROFF TRACER

Commercial builders, energy companies, data center operators and industrial producers worldwide have long trusted nVent CADDY, ERICO, HOFFMAN, RAYCHEM, SCHROFF and TRACER products for their electrical connection and protection needs.

# These market-leading brands have united under a new company: nVent.

As nVent, established electrical brands that previously were part of the diverse Pentair offerings will join forces under a single mission: At nVent, we believe that safer systems ensure a more secure world. We connect and protect our customers with inventive electrical solutions.

The nVent name reflects the collective legacy of its trusted brands, which have helped set the global standard for innovative electrical components and systems for more than a century.

Maximize your productivity.  
Minimize downtime.  
Reduce operating costs.  
Trust nVent to connect  
and protect your electrical  
infrastructure.

## CUSTOMERS ALWAYS COME FIRST

As an nVent customer, you'll receive the same exceptional product performance and customer service you've come to expect from our core nVent CADDY, ERICO, HOFFMAN, RAYCHEM, SCHROFF and TRACER product brands.

In addition, trusted brands such as nVent ERIFLEX, LENTON, NUHEAT, PYROTENAX, and others, will remain in our portfolio.

Your existing channel, direct salespeople and distributors will continue to work with you as we launch improvements to enhance our customer experience. Through our transition to nVent, we will continue our commitment to put customers first.

# nVent BUSINESS SEGMENTS AND BRANDS

nVent is a \$2 billion company with nearly 8,800+ employees worldwide. We operate three business segments, each boasting brands that are among the most established in the electrical industry.

**ELECTRICAL AND FASTENING SOLUTIONS**  
CADDY ERICO

**ENCLOSURES**  
HOFFMAN SCHROFF

**THERMAL MANAGEMENT**  
RAYCHEM TRACER

An electrical system is only as secure as the components used to fix, fasten and protect cable and wire systems. Those who design and install electrical systems rely on nVent for industry-proven, globally compliant fastening and facility electrical protection systems.

In addition to our superior technical performance, nVent's electrical and fastening solutions are comprised of superior engineered products for niche electrical, mechanical and concrete applications.

nVent ERICO offers components for electrical protection, rail and transit connectivity, telecom installation, and utility and industrial facility electrical installation systems.

The nVent CADDY brand includes fixing, fastening and support products for electrical installation, seismic and fire protection, data communications and heating, ventilating and air conditioning systems.

We also offer nVent ERIFLEX low-voltage, space-saving power and grounding connections for electrical panels. nVent LENTON is a world-leading provider of engineered products for concrete-reinforcing steel connections.

Electrical systems come in all shapes and sizes, from massive industrial controls to single components. nVent offers a comprehensive range of enclosures that house these vital assets.

Marketed under the nVent HOFFMAN and nVent SCHROFF brands, our enclosures offer two-pronged protection: safeguarding electrical equipment from the operating environment and people from electrical hazards.

Our expansive product portfolio ranges from modular marshalling cabinets to small junction boxes. Each defies dust, corrosive substances, temperature extremes, and the harmful effects of vibration and shock.

The nVent HOFFMAN brand includes steel, stainless steel and non-metallic enclosures; modular enclosure solutions; and industrial cooling systems.

The nVent SCHROFF brand includes server cabinets, data center cooling solutions, power supplies, subracks and cases.

Catastrophic events — from frozen pipes and liquid leaks to train derailments — can alter lives.

Our nVent RAYCHEM solutions include heat tracing for pipes in industrial plants, buildings and infrastructure; heating system components; fire-rated wiring cables; floor-heating cables and mats; and thermostats and controls.

Our nVent TRACER offerings include turnkey heat management services, including design, engineering project management and construction services.

Our suite of solutions ranges from nVent PYROTENAX — mineral-insulated cables and accessories for use in the most critical fire-related and other high temperature environments — to nVent NUHEAT, radiant floor heating that puts warmth underfoot in homes across North America.

The solutions are deployed across a variety of markets, including industrial, energy, commercial, residential and infrastructure.
