#### **OVERVIEW**

The nVent ERIFLEX Network Analyzer is a compact, innovative tool for measuring and recording electrical parameters, ideal for energy consumption analysis and control.

Its quick and easy connections make it perfect for retrofitting existing switchboards or conducting energy audits.

Designed to establish measurement points across your facility, it supports communication via:

- RS485 (MODBUS RTU) PM RS485 version
- Ethernet (MODBUS TCP) PM Ethernet version

Remote management is available through EriflexNET software, and the Ethernet version includes a web interface for easy access from any PC on the network.

#### **APPLICATIONS**

**Energy audits** 

Monitoring and control systems

Individual machine load tracking

Power peak management

Switchboards, gensets, and motor control centers

Remote metering and cost allocation

#### **MAIN FEATURES**

- Ultra-compact DIN 96x96 design (only 39 mm depth)
- Backlit LCD display
- Four-quadrant bidirectional energy and power measurement
- Key electrical parameters for cost-effective consumption analysis:
  - Voltage, Current
  - Active, Reactive, Apparent Power
  - Power Factor, Frequency
  - Harmonics (up to 15th)
  - Phase Order
- Three selectable current scales
- 8 MB memory for data and energy counter logging

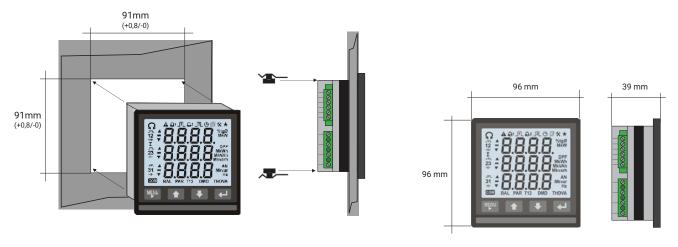

- MIN/AVG/MAX recording for up to 24 real-time parameters
- Communication via MODBUS RTU (RS485) or MODBUS TCP (Ethernet)
- · Remote management via EriflexNET software or web interface
- Two digital outputs for alarms or pulse signals
- One digital input for Demand (DMD) value calculation sync
- Class 0.5 accuracy (IEC/EN 61557-12) for active power/ energy
- Flexible wiring for single or three-phase systems, adaptable to any layout
- Built-in integrator with dedicated Rogowski input, precalibrated for nVent ERIFLEX coils

#### **SPECIFICATIONS AND VERSIONS**

Features and Versions	Features and Versions							
Article Number	509010	509011						
Catalog Number	PM RS485	PM ETHERNET						
Weight	0,33 Kg	0,26 Kg						
Packing unit	1 pc							
Current Inputs	Rogowski inputs (3 x coils, order separate	ely)						
Auxiliary Power Supply	230 VAC ±15%	85 - 265 VAC / 110 VDC ±15%						
Communication Port	MODBUS RTU	HTTP, MODBUS TCP						
Instrument Remote Management	EriflexNET	Web server						
Sign representation in Modbus Protocol	Sign bit							
Digital Outputs (2 x)	For alarm events or pulse emissions							
Digital Input (1 x)	For synchronizing the Demand (DMD) value calculation							
Demand (DMD) Value Calculation Mode	Digital input synchronization with fixed or	r sliding demand window						
Memory	8 MB							
Recordings	Programmable MIN/AVG/MAX values for up to 24 real-time parameters							
recordings	Energy counters							
	Three-phase, 4-wire system with 3 current inputs (3.4.3)							
Wiring Modes	Three-phase, 3-wire system with 3 current inputs (3.3.3)							
Willing Modes	Three-phase, 3-wire system with 2 current inputs (3.3.2)							
	Single-phase system (1 Ph)							
Total Harmonic Distortion (THD) and	Voltage and current THD values							
Harmonics	Harmonic analysis for voltage and current up to the 15th order							
Apparent Energy Tracking Counters	Separate inductive and capacitive energy counters							

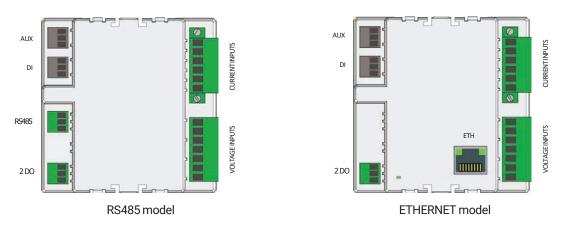

#### **DEVICE DIMENSIONS AND PANEL CUTOUT**

Optimized for seamless front panel integration.

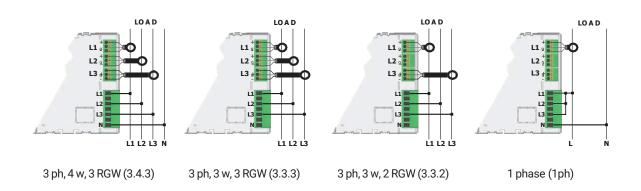

#### **REAR VIEW AND CONNECTION LAYOUT**

Visual overview of back-side wiring and interface points.

#### **CURRENT AND VOLTAGE INPUTS**

Supports flexible input configurations for accurate electrical measurements.

#### **MEASUREMENTS AND RECORDINGS**

Instantaneous Harmonic Analysis up to the 15th order

#### **OVERVIEW**

Rogowski coils are advanced, flexible sensors used for precise AC current measurement. Their coreless design makes them exceptionally light and easy to install. Simply wrap the coil around the conductor.

This flexibility not only simplifies setup but also ensures accurate detection of the AC component without saturation, making them ideal for dynamic environments.

#### How Do Rogowski Coils Work?

The principle is simple yet powerful: an "air-core" coil is placed around the conductor in a toroidal shape. As current flows, it generates a magnetic field that induces a voltage in the coil. This voltage, proportional to the rate of current change, is then integrated to produce a signal that accurately reflects the current.

#### Slim, Lightweight and Flexible. Designed for Effortless Installation.

#### **Quick and Easy Installation**

Installing a Rogowski coil is fast and intuitive: simply wrap it around the conductor and secure it with a bayonet closure. Just one click and it's done in seconds, regardless of the conductor's size or shape.

#### Compactness and Scalability

Thanks to its coreless design, the coil remains lightweight and compact, making it ideal for tight spaces. Unlike traditional transformers, its dimensions and weight are unaffected by the current level, ensuring scalability across diverse applications

#### Continuity and Security

The coil offers a non-intrusive solution that draws no power from the main circuit. Its robust bayonet mechanism guarantees a secure closure, enhancing performance and reliability.

#### **High Precision**

Enjoy exceptional accuracy with positioning errors below 1%, even near the junction point. The coil is insensitive to the internal conductor's position and unaffected by nearby external currents. Full shielding of both coil and cable ensures signal integrity.

#### **Wider Measuring Range**

A single Rogowski coil can measure a wide range of current values, from just a few amps to several kiloamps, making it a versatile solution for various applications

Thanks to its coreless design, the coil avoids saturation, ensuring high linearity even at elevated current levels. This results in consistently accurate readings and a reliable. universal measurement solution.

#### Lightweight and **Space-Saving Design**

Thanks to its coreless construction, the Rogowski coil is exceptionally flexible and compact, perfect for installations in confined or hardto-reach spaces. Its lightweight structure allows it to be easily suspended around the conductor, simplifying setup without compromising performance

#### **Excellent Cost-Performance Value**

The Rogowski coil stands out as a versatile and cost-efficient solution, capable of adapting to a wide range of applications. Its compact, coreless design reduces expenses across purchasing, transportation, and storage, resulting in streamlined logistics and optimized business operations.

#### **Consistent Measurement** and Precision Calibration

Every nVent ERIFLEX Rogowski coil is individually tested and calibrated to ensure optimal performance and consistent measurement accuracy.

Engineered for precision, the coil maintains extremely low positioning error, whether installed perpendicularly or diagonally, delivering dependable results across varied setups.

#### **MAIN FEATURES**

- Flexible Rogowski current sensor suitable for both retrofitting and new installations
- Easy to install around large cable diameters or various conductor types - compact, space-saving, and user-friendly
- Maintains high system availability with installation that doesn't require disassembly of existing components
- Securely fastens to busbars, round conductors, and all nVent ERIFLEX conductors (Flexibar, FleXbus, IBSB...) using a robust mounting system
- Delivers high linearity with no saturation and no upper current limit, thanks to its coreless design
- Can be installed while the system is live ensuring service continuity with no power interruption, downtime, or mechanical constraints

#### UNIVERSAL MOUNTING BRACKET FOR ROGOWSKI COILS

The Rogowski coil mounting bracket is included with all Rogowski coils provided by nVent ERIFLEX. It enables quick and easy installation on any nVent ERIFLEX conductor, such as FleXbus, Flexibar, IBSB, copper busbar, or other electrical conductors like cables.

Suitable for both insulated and uninsulated conductors, the bracket comes with plastic ties to secure it in place. It ensures the conductor is centered within the Rogowski coil for improved measurement accuracy and allows the coil to be angled when space between phases or around the conductor is limited. If needed, the bracket's length can be shortened using wire cutters.

Material: Glass Fibre Reinforced Polyamide

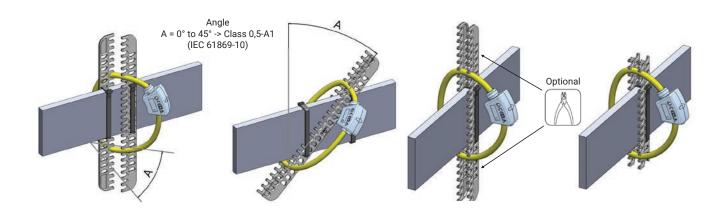

Flame Retardancy and Self-Extinguishing: IEC® 60695-2-11 (Glow Wire Test at 960°C), UL® 94V-0

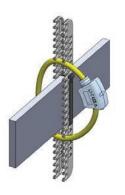

Halogen-Free: IEC® 60754-1

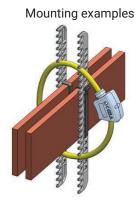

Low Smoke Emission: ISO 5659-2

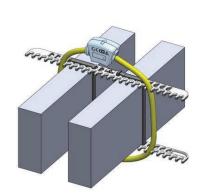

**Maximum Operating Temperature:** 110°C

### Remote Management

#### **ERIFLEXNET SOFTWARE AND INTEGRATED WEB SERVER**

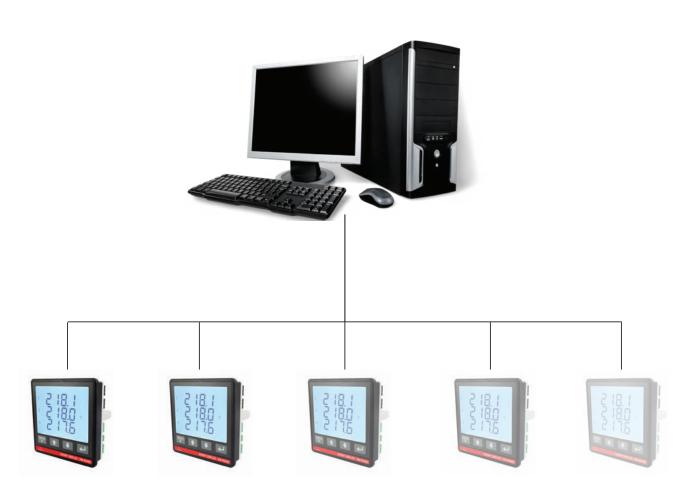

EriflexNET software is available free of charge for remote management of nVent ERIFLEX three-phase network analyzers. It supports both PM RS485 and PM Ethernet power meter models and communicates via MODBUS RTU and TCP protocols, offering full control over the power meter's functionality.

For PM Ethernet models, a built-in web server enables direct access from any PC, smartphone, or tablet. Simply use your browser for seamless monitoring and management.

#### **MAIN FEATURES**

- Communication via MODBUS RTU (RS485 port) or MODBUS TCP (Ethernet port)
- Supports management of up to 32 devices simultaneously
- Enables full reading and display of electrical measurements including voltage, current, power, THD, harmonics, and more
- Remote access available via modem connection
- EriflexNET software for centralized remote management, or integrated web server for Ethernet-based models
- Web server provides real-time and historical data, accessible directly from any browser on PC, smartphone, or tablet

- There is no additional software required for the Web Server, instant access via IP from any device
- Comprehensive monitoring of key parameters including energy counters, DMD, and MIN/AVG/MAX values
- Internal memory ensures uninterrupted data logging, even without active supervision
- Adjustable recording intervals from 10 seconds to 60 minutes to suit specific monitoring needs
- Easy data export in .CSV format for professional analysis and reporting
- High-performance, intuitive web interface, fully developed in-house for seamless integration
- Multilingual user interface for global accessibility and a smooth user experience

### Remote Management

#### **WEB SERVER INTERFACE**

Accessible directly from your browser on a PC, smartphone, or tablet. Available with the PM Ethernet power meter model.

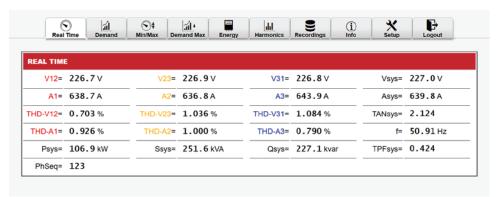

#### Multilingual User Interface

Designed for global accessibility, the multilingual UI ensures a seamless experience for users across regions.

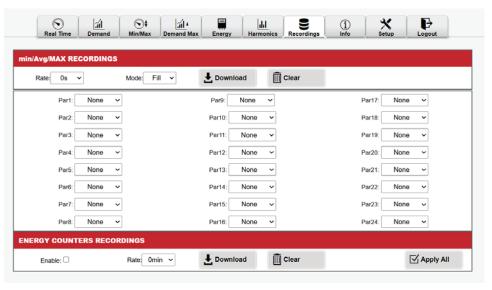

#### **Intuitive Tab Navigation**

Easily switch between key views including Real-Time, Demand, Min/ Max Recording, Energy, Harmonics, Recordings and Downloads (energy counters and min/average/max).

#### Real-Time Tab

Displays live measurements such as voltage, current, harmonics, frequency, and phase sequence.

#### **Recording Tab**

Captures historical data including voltage, current, harmonics, frequency, phase sequence, and energy counters with export capability for further analysis.

### Remote Management

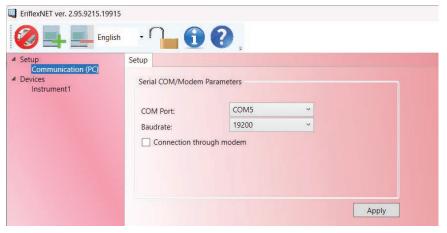

#### **ERIFLEXNET SOFTWARE**

EriflexNET communicates via MODBUS RTU and MODBUS TCP protocols, supporting both PM RS485 and PM Ethernet power meter models.

#### **Software Download**

https://www.nVent.com/sites/default/files/acquiadam/assets/EriflexNET\_ver.2.95\_250325.zip

#### **Multilingual User Interface**

The multilingual user interface ensures global accessibility and a seamless experience for users across regions. It supports the management of up to 32 power meters simultaneously, making it ideal for scalable installations.

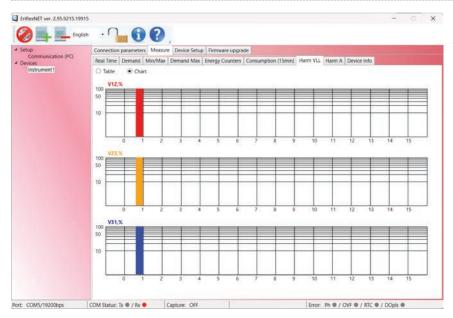

#### Intuitive Tab Navigation

Navigation is intuitive, with clearly organized tabs including Real-Time, Demand, Min/Max Recording, Energy, Harmonics, and Recordings and Download. These tabs provide quick access to key data such as energy counters and Min/Average/Max values.

#### **Real-Time Tab**

The Real-Time tab displays live measurements including voltage, current, harmonics, frequency, and phase sequence.

#### **Harmonics Tab**

Harmonics tab offers both chart and table views for voltage and current analysis, enabling detailed monitoring and diagnostics.

### Installation and User Documentation

#### **POWER METER - FULL USER MANUAL**
