The diagram illustrates the assembly of a cable with a braided shield, showing three main stages:

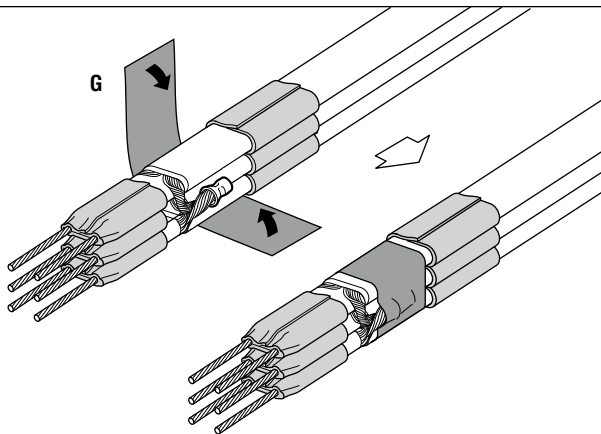

- Top Section:** Shows the initial preparation of the shield. A braided shield is being applied to the outer jacket of the cable. Arrows indicate the direction of assembly.
- Middle Section:** Shows the stripping and braiding process. The outer jacket is stripped back by 150 mm, and the inner insulation is stripped back by 125 mm. The braided shield is then braided together with the inner conductors. A dimension line indicates a 150 mm length for the braided section.
- Bottom Section:** Shows the final assembly. The braided shield is secured with a crimp or solder connection. A dimension line indicates a 125 mm length for the braided section. A small component, labeled 'C', is shown being attached to the end of the cable.
